

# Webroot SecureAnywhere® Business **Endpoint Protection**

The security industry had a **BIG IDEA** about how to address today's *increasing threats*. Push down gargantuan loads of signatures to ever **fatter** software clients.

Face it, your current endpoint security software is slow, heavy, and you wonder if it causes more problems than it solves. Meanwhile you have to keep up with a number of new challenges – from a more mobile workforce to more dangerous malware.

# Has this broken model pushed you to the **breaking point**?

Do long scan times, massive downloads, and slow performance make your users less productive

?

Do constant updates, patches, and reimaging requests distract you and your staff from addressing true business needs

?

Does mammoth security software consume too many resources on your users' computers – and does managing it require a dedicated server

?

Are you concerned that you don't have enough control when endpoint devices leave the office

?

*"Over 450,000 new malicious software programs are registered each day."*

AV-Test, The Independent IT - Security Institute

*"67% of attacks carried out are for criminal purposes."*

Hackmageddon.com

*"No organization is immune to the problem of security risks, regardless of size."*

Canalys Research

# Fixing security requires a new, Smarter approach.

It's called *forget the old approach.*

Seeing traditional security software become too big and too much of a burden on endpoint devices, networks, and IT staff, Webroot decided to start fresh. We built a new kind of security software that completely does away with old-school approaches like signature downloads, the need for constant updates, and big-footprint client software.

The result is Webroot SecureAnywhere® Business Endpoint Protection, the fastest, least disruptive, and most effective endpoint protection ever.

*"Downloaded, copied to target, set up, installed, running, baselined, and fully scanned in 5 minutes? I'd love to see anyone else come close."*

Sean Kethcart, IT Systems Support Analyst, Haymarket Center

*"This is by far the fastest, easiest malware solution I have ever used."*

Danny Olson, IS/IT Specialist Medamorph, LLC

*"Fastest install I've ever seen. Scan is also impressively fast."*

Juli Ahlers, IT Support Analyst,  
Faddis Concrete Products

# Work vs. **Wait**

Screaming fast scans,  
instant installs, and more  
innovations mean you  
and your employees stay  
productive.

Webroot SecureAnywhere® solutions *download, install, scan, and detect faster* than you can boot up a PC running conventional security software.

Webroot SecureAnywhere Business Endpoint Protection puts more time in your employees' day – and yours.

It delivers ultra-fast scans – many times faster than security competitors. Webroot customers have observed scan times over 14 times faster than Kaspersky.\* It also eliminates lengthy signature downloads, so employees spend more time being productive instead of waiting for security software to do its thing.

You'll spend less time dealing with chores like updates and support calls. Our superior protection and rollback features mean you can take back the countless hours required to reimage machines. The Webroot approach also completely eliminates the need to manage a dedicated server.

Better still, Webroot SecureAnywhere software takes just seconds to install.

## Just how much faster is Webroot?\*

- » Average installation time for conventional security software: almost 7 minutes
  - Webroot: **5 seconds**
- » <1MB client installs **158x faster** than Symantec .cloud and **54x faster** than Kaspersky Endpoint Security
- » Scheduled scans more than **20x faster** than competitor average

**4x**

faster than industry average

*"I've used numerous antivirus programs in the past, but Webroot exceeds them all, in my opinion. Scan times are usually around 60 seconds, which is the fastest I've ever seen. The impact on system resources is incredibly small. I've never noticed Webroot slowing a system down."*

Karl Pattyn, IT Support Technician  
Eldorado Trading Company

# More Secure vs. More or Less Secure

Webroot earns top marks for SecureAnywhere™  
malware protection.

# Smarter Cybersecurity™ solutions for your devices: here, there, anywhere.

**“The only perfect malware blocking score I’ve ever encountered in my years of testing.”**  
Neil Rubenking - PCMag

Independent testing and reviews give Webroot top ratings for protection against malware.

Real-time global threat detection not only defends against known threats but also instantly thwarts new attacks the moment they strike the first user in the global Webroot-protected community. If an attack does hit a user’s system, Webroot quickly rolls back the system to a pre-existing, non-infected state. No re-imaging required. And SecureAnywhere Business Endpoint Protection is the only

*“Loving the product already! Symantec antivirus scan: two hours. Webroot scan: four minutes. Webroot also found an infection on my box in a download package that had been there for months. Already seeing serious benefits!”*

Ty Smith, IT Administrator - Doris, Inc.

solution that can work alongside other security products without conflicts. As a result, you can deploy it as an added layer of defense or trial it without uninstalling your existing endpoint security software.

It delivers the same protection and visibility for any device in the global Webroot-protected community – inside the office or out. This unique capability offers a key advantage in an era of mobile workforces and proliferation of user-owned devices. A comprehensive console lets you change settings, set groups and policies, and identify what infections are loose in your network. It also gives you the ability to white list and black list files that are unique to your organization, as well as offering other advanced management capabilities.

The new world of business is not the place for ancient security software.

- » 81% of large companies suffered breaches in the last year
- » \$800,000 (£500,000) is the average cost of a breach\*

# Bits vs. **Bytes**

The tiny Webroot agent  
packs plenty of power.

# Webroot cut the **dead weight** out of security.

By changing the entire security paradigm away from a signature-based approach, Webroot trimmed security software and management down to size. Rather than pushing updates over your network and down to individual systems, threat data resides on Webroot servers.

## The World's Smallest Endpoint Security Solution

Consequently, the tiny Webroot SecureAnywhere agent packs enormous power for its tiny size – less than one megabyte. It gives you all the protection you need without users having to put their work on hold while they wait as huge signature updates are downloaded. And unlike the large client software deployed by conventional solutions – which slow down the latest machines and make older computers unusable – the light Webroot agent has virtually no impact on the host machine's performance. At the same time, it uses 16x less RAM than the average competitor.\*

### Just how much faster is Webroot?\*

#### Conventional Security Software

Average installation size  
**1148 MB**

Average memory usage during initial scan  
**210 MB**

Average memory usage during system idle  
**137 MB**

#### WSAB Endpoint Security

Webroot installation size  
**2 MB**

Webroot memory usage during initial scan  
**13 MB**

Webroot memory usage during system idle  
**5.5 MB**

*"With fewer fires to put out in the aftermath of infections, I've found myself with half my day freed up in some cases. Our users have noticed a significant difference, too -thanks to Webroot's amazingly fast scan, their work is no longer disrupted by computer slowdown."*

Peter Canale, Director of IT, Ben Tire Distributors, Ltd.

Millions trust Webroot  
**10,500,000**  
users

# The only thing weighty about Webroot software is the numbers.

PassMark put Webroot SecureAnywhere® Business Endpoint Protection head to head with the big guys, and their performance didn't come close.

## *Perfect PassMark Score*

## *Webroot's PassMark Score*

## *Next Closest Competitor's Score*

## Installation Size

» *Webroot takes 606x less disk space* than Symantec .cloud

## Scheduled Scan Time

» *Webroot scans 95x faster* than McAfee Complete Endpoint Protection–Business

## Memory Usage During Initial Scan

» *Webroot uses 19x less memory* than McAfee Complete Endpoint Protection–Business

» *Webroot uses 39x less memory* than Sophos Cloud

## Install Time

» *Webroot installs more than 54x faster* than Kaspersky Endpoint Security
